

On the Fundamental Inadequacy of the Theory of Quantum Mechanics

Mohsen Paul Sarfarazi, Ph.D.

July 7, 2012

Introduction

- The greatest student minds of physics and, in particular, mechanics lead by Newton, Einstein, and others have always strived to understand the mechanics of Universe, or more appropriately 'existence.'
- The ultimate goals of these scholars in their scientific life have been to formulate 'a Theory of Everything.'
- And, with no surprise, they have all failed.

The Meagerness of the Quantum Theory

- The fundamental shortcoming of Einstein's formulation for describing the Theory of Everything is that it does not allow for thought, the most prominent source of energy in the Omniverse, as a contributing parameter in the equation.
- Therefore, the equation could not balance, and therefore, it fails.
- It actually turns out that humanity, at this stage of consciousness and power of comprehension and discernment, will not be able to come up with such an equation presently.
- The most fundamental limitation stems from the fact that mankind currently does not have adequate understanding and appreciation for the phenomenon of consciousness that is the very crux of the equation.
- The author has sufficiently emphasized the importance of consciousness in creating reality through thought prognosis previously.
- Indeed, the mechanics of conscious creation is undoubtedly driven by projection of crystal clear thoughts qualified as beliefs, without any inherent

possibility of doubt, as filtered through the pituitary and pineal glands, with the affirmation of incumbent support of emotional commitment, as verified by the thymus within a physical body capable of producing impeccability.

- Indeed, the concepts of space and time are illusional.
- In reality, neither space nor time actually exists.
- Therefore, the foundation of time and space continuum only exists and is created within the conscious mind of humanity.
- Strictly speaking, we all consistently live in a NOW moment within all parallel realities.
- Consciousness, or 'life' as we look upon, is not continuous.
- We all 'live' in a vacillating status of consciousness through vibrating, by jumping in and out of existence.
- Since the period or wavelength of this vibration is extremely minute in our present perception, we do not 'sense' the absent time period which is of the order of 10^{-43} second.
- The consciousness that we obtain is through receiving coded coherent Light energy in what may be referred to as 'unit consciousness.'
- The extent of Light attained determines our 'Light Quotient,' which is another measure of consciousness.
- Correspondingly, our 'natural frequency of vibration,' or simply 'vibration rate' is yet another indication of our state of consciousness.
- And, ultimately, it all relates to the extent of energy we acquire, which is our consciousness energy.
- Recall, everything in the Universe is energy, and the Principle of Conservation of Energy indicates that, once present, energy cannot be destroyed and it can only change form.
- Thus, once our 'oversoul' is created by the Almighty and is given energy of consciousness, it may create fragments of itself, referred to as the 'soul', and furthermore, it may disperse this energy to its fragmented soul constituents; but it may never be destroyed.
- This is why, ethereally speaking, we are all eternal beings, and never die.
- Our physical vehicle can perish, but we live forever etherically.

- The overall objective of a conscious Being is to evolve in awareness through 'life' experimentations and learning as to increase consciousness to graduate to higher dimensions of existence, each characterized by their enhanced vibration rates and degrees of consciousness energy.
- In this respect, we can distinguish among distinct 'dimensions' of existence.
- It needs to be further clarified that the primary reason for oversoul fragmentation is that so we reincarnate in multiple bodies simultaneously and learn as much as possible separately, and then integrate later and get the benefit of acquired wisdom of our aggregate constituents.
- The mechanics of consciousness or 'life' has been discussed in detail elsewhere.
- Considering our limited 3D consciousness, we describe a space continuum field characterized by 3 different translational and 3 rotational coordinates, and we seek to analyze and track the spatial position of points within this continuum through application of tensor calculus.
- Each point is traced by assigning a position vector characterized by defining 3 different scalar quantities that are related to its translational coordinates.
- Similarly, a line may be traced in the continuum through characterization of its rotation within the field defined by three distinct angles describing the rotational positioning of the line relative to the aforementioned coordinate system.
- The characterization of the position of one point with respect to another [points at the end of the said line] signifies the quantity of one vector depending on another vector, which in terms of tensor calculus represents a second order tensor.
- Therefore, in order to describe the positions of two such points in the 'space,' we need to quantify 3 to the power 2 scalar coordinates, which comes to 9 scalars.
- These quantities represent 3 translational-translational, 3 rotational-rotational coordinates and three hybrid or cross quantities that would signify the dependence of one translational coordinate with respect to another

rotational coordinate, and vice versa. Symmetry is assumed regarding the hybrid coordinates.

- With the addition of time as another dimensional coordinate there are 10 dimensions to consider.
- Considering the interaction of one Universal 'time-space' continuum with respect to a neighboring one, through description of yet another dimensional coordinate we obtain 11 total dimensions.
- In order to relate the dimensional nature of the aforementioned 3D continuum to that of the consciousness dimensions, let us focus on the question of existence of 'time' and 'space' first.
- In a physical world, it is often easy to relate to the concept of spatial coordinates as we would simply visualize moving left to right, up and down, and to and fro, and vice versa.
- Similarly, it is not difficult to imagine rotating about an axis in a clockwise or counter-clockwise manner, of which there are three distinct axes to consider.
- However, what exactly is space?
- Likewise, as we reincarnate in a delicate, tiny body at birth, and we watch ourselves grow to adulthood, and constantly observe an ever-changing, dynamic Universe around us, it is easy to think of time and have the notion of past, present, and future.
- Furthermore, living in the 3rd dimension, with low and limited consciousness, in a dimension emanated by relatively low-velocity Light, with a sufficiently delayed consciousness 'time' period of 10 to the -43 [as characterized by our low status of consciousness], it is vitally 'sensible' that we perceive the existence and cruciality of 'time' in our reality.
- Remember, consciousness is obtained through projection of stroboscopic
- Light, and a faster flashing Light instigates higher Light quotient and consciousness.
- Furthermore, more delayed consciousness period prompts lower vibration rate.
- But, again, what exactly is time, when considered as a coordinate?

- Although our mainstream scientist would disagree, the speed of light is in fact NOT constant.
- Physical space, as we think of it, in truth, does not exist, rather it is a holographic projection, but one that follows certain parameters or laws.
- In truth, space and time are different expressions of the same phenomena.
- In a manner of speaking, space is congealed time, and its velocity relative to the speed of light determines the density of the congealed space.
- **Time is varied by light velocity** and light geometry according to dimensional perspective.
- So the geometry of light is an aspect of dimensional time.
- Likewise, distance is a factor of light velocity.
- As such distance in space is a variable.
- It is possible in higher dimension that the distance between two separate places, two distinct and separate points is zero.
- Likewise, the time sequence between two separate events can also be zero.
- This is called the eternal NOW. All are variables of velocity.
- Thought, the very essence of Creative Mind is what may be referred to as the **'innerspace.'**
- True reality is 'innerspace,' and the Cosmos of innerspace expands constantly in terms of energy and consciousness.
- And, indeed, everything is consciousness, and everything is energy.
- Archangel Metatron, in one of his Higher Expressions as 'Lord Metatron, is in his role, converts inner space, or Creative Mind, into Coded Light.
- This, through a great cooperative, congeals Coded Light energetically into our physical dimensional realities.

The Present Speeding Nature of 'Time'

- Undoubtedly, you have noticed by now that 'time' is speeding up.
- All of us are innately aware of this within our higher perceptions.
- In 2007, it was determined that our typical 24 hour day was equivalent to 18 hours when compared to two decades ago.

- **Indeed, the days of our now, contain less than 18 hours of time, although our timepieces measure 24.**
- **However, our bodies know better.**
- **If we accept the postulates that are given to us from the higher dimension, it is easier to understand the changes that are taking place, changes that both our body and higher mind readily sense and feel.**
- **Time is indeed speeding up and will continue to do so.**
- **This is a natural consequence of Light accelerating.**
- **It is now the time for ascension of mankind to higher dimensions of consciousness, which will begin on 12/21/2012.**
- **This is the time for Ascension as was predicted by the 'Mayan' Calendar and other prophets of the yesteryears.**
- **Our higher mind is fully aware that it can meld with the new higher Light quotients, and as such, helps us adjust to the increasing frequencies of the heralded Ascension.**
- **It is recommended that those of us who wish to skillfully adapt to the frequencial metamorphisms, take better care of our physical vehicles.**
- **It is recommended that we spend more time in quiet meditation, and tap into the frequency of the conscious grid.**
- **Archangel Metatron has channeled many such meditation exercises through James Tyberonn and others.**
- **The physical body and the human etheric body can more easily adjust to the crystalline frequencies through the use of higher frequency quartz crystals, phi spiral multi-faceted Vogel crystals and specific gemstones.**
- **Certain of our gemstones, especially those that are single refractive, have the ability to 'slow' the speed of light. Our scientists know this.**
- **Recommended single refractive gems are diamonds of at least one carat, and tsavorite or demantoid garnets of over 2 carats.**
- **These SR Gems can assist us most effectively, as well as enhance our life force.**

Earth's New Crystalline Consciousness Grid and Firmament

- It is of grave importance that we understand that the geometric, energetic grid that is being 'fired' into brilliance, the 144 Crystalline Grid on 12/12/12, and the fact that it is bringing many changes to our physical reality through laws of physics and laws of consciousness that are currently beyond the scope of most of humanity, and certainly well above the conceptions of mainstream academia on the Earth at this time.
- These topics are covered separately in detail elsewhere.
- Suffice it to say that below is a compilation of the information that has been provided to us by Archangel Metatron regarding Earth's new Crystalline Crysto-Electric Consciousness Energy Grid and the firmament.
- The grids grow into completion.
- Beyond the 144 Crystalline, will be the Polyhedron 120 Geodesic sphere, and it will achieve its completion by the year of 2024.
- Multidimensional access will be fully achieved with the Crystalline Grid.
- In truth, the Polyhedron 120 is a greater aspect of the crystalline field.
- The completion of the grid system will complete a cycle that will lead to the eventual establishment of a 'Crystalline Firmament.'
- The Crystalline Firmament will evolve in a sequence after the adjustment of the axial and polar energies of the planet; after the changes of what is termed global warming; after the planet sheds her old skin and adorns her new one.
- Consider the geometric-crystalline completion of the geodesic grids as a flower achieving full bloom, at which point a cosmic pollination will occur and an energetic seed-field will come into effect.
- The very completion of the perfect geometric form germinates a **new field** from its unified perfection; and that field may be called the **Crystalline Firmament**.
- It will emerge as two great elliptical bands of energy that intersect at 90-degree angles around the planet.
- One will carry the color and essence of platinum, the other of gold.
- One will be electrical in nature the other magnetic.

- Their energies will circulate in modulated opposition, and the field between the two will encompass the planet in a spherical manner.
- And from this a conscious self-aware field circumnavigates the planet to allow for an even greater perfection of the Earth.
- This Crystalline Firmament will allow for what was termed by the ancients as the 1000 years of peace; better said, as a modulated amplification of balanced resonance. The magnetics of the planet will be in supreme, optimal balance.
- The Earth and Human Kind will have need for the Crystalline Firmament, and will call it forth. It will assist in many roles, perhaps more than you imagine.
- It will deflect meteorites and comets.
- It will lessen the effects of gamma rays into the Earth's atmosphere.
- It will come forth by a natural and scientific effort.
- In this respect, it will propel humanity to a Class IIV or higher civilization, capable of guardianship and maintaining its planet of inhabitation and warding off against outside attacks and astronomical disasters.
- It is the natural offspring of the completed crystalline grid.
- The firmament is not new.
- The bible speaks of a firmament that occurred in the most ancient of days, and described it as a 'dome' in the sky.
- Before our planet had a grid system, it has a firmament.
- Before our planet became a planet of lesson, a planet of duality, it had a protective sheath called the firmament.
- The ancient firmament encircled the planet in two layers, one magnetic and one electrical, and between the two layers there existed a complex crystalline form of ice.
- The frozen water was slightly saline and held properties that enabled the winds and all weather to be modulated.
- At that time, the Earth was a place of supreme creation, of adventure.
- It had not yet evolved into the school it since became.
- It was, one might say, the original Garden of Eden, before serpents and apples.

- **Before the fall of the firmament the Earth was not a planet of duality.**
- **That which some terms the great fall was the dissolution of the firmament.**
- **In truth, it was by design that a great wave seared through the cosmos, one so powerful that the firmament fell into particulate, and the earth shifted on its axis.**
- **The magnetic shield was absorbed into the inner core of the earth, and the electrics, into the crystalline minerals and indeed into the DNA of mankind.**
- **From this particulate, arose the gravity grid and the evolution of the icosahedronal human electric grid.**
- **From the dissolution of the firmament, man began his journey in duality, in lesson.**
- **The rest, as you we say, is history.**
- **And this history, in all its parallels and probabilities and eternal NOWS, over the eons of Earth time, in the blink of an eye, brought us to the Harmonic Convergence, the great measurement, and to the coming Ascension.**
- **All is on course, all is evolving, and all is perfect in the geometric Grids.**
