

On the Intricacies of our Physical and Astral Bodies

Mohsen Paul Sarfarazi, Ph.D.

February 16, 2012

Introduction

- As highly complex and intricate beings comprising of ethereal soul and physicality we carry both physical and astral bodies.
- The physical body is simply our biological make up which consists of energy in form of dense matter in the combined form of solid, liquid and gas as well as energy that is used to sustain our physical animation.
- The astral body on the other hand is composed of antimatter being based in matter which is in stealth form driven by the very light energy that gives it life or consciousness.
- The astral body functions through fragmentation of the SOUL into components which may exist in distinct dimensions simultaneously gathering experience, knowledge, and further consciousness for the soul.
- The simplest component of the soul is that of the SELF "Aspect" which exists and animates our physical bodies in the lowest harmonic universe comprised of highly dense matter with lowest possible energy.
- The SELF fragments or Aspects are composed together to form the soul which may exist in the 2nd harmonic universe characterized by distinctively a higher frequency of vibration, more pronounced energy in a significantly less dense dimension.
- Similarly the amalgamations of soul fragments give rise to OVERSOUL, the oversoul fragments to AVATAR, and finally avatar fragments to RISHI belonging to 3rd, 4th, and 5th harmonic universes, each consisting of 3

different time matrices or dimensions, corresponding to higher natural frequencies of vibrations and higher energies.

- There are therefore a maximum of 15 time dimensional matrices existing in 5 distinct harmonic universes each characterized by its own discrete frequency and energy.
- Each harmonic universe is insulated by a magnetic repulsion zone distinct from an adjacent universe.
- All these time dimensional matrices exist and operate in the NOW moment simultaneously.
- The primary objective or 'Divine Plan' for a soul is to gain further consciousness through evolution and ultimately contract or return back to the prime creator.
- This forward evolution is obtained through SERVICE to others as well as SELF through the fundamental directives/goals of COMPASSION and UNCONDITIONAL LOVE.
- The unconditional love is the 'glue' that binds all beings together and is comprised of the highest frequency possible for any emotion.

Physical and Astral Implants

- The subject of implants from a higher perspective and from a point of view of genetic engineers will be discussed.
- There has been much written on this subject and yet so little seems to be known.
- A genetics engineer is one who is responsible for creating physical vehicles through which we as souls can experience a physical incarnation.
- Implants are critical in a work of genetic engineers.
- They use implants to anchor our life blueprint into our physical body.
- These implants contain all the lessons, patterns and events that we wanted to experience when we and our guides created our life blueprint.
- They call these particular kind of implants our "blueprint implants."

- **As we go through our incarnation learning the lessons that we came to learn, these implants are restructured to reflect our new state of awareness or consciousness.**
- **When we go through accelerated DNA recoding, our lessons come to us at a faster pace.**
- **As we clear these lessons and they restructure our blueprint implants, our DNA changes as well.**
- **We also gain new neural pathways that enables us to hold and use our new behavior patterns which are the result of learning our lessons, and clearing their corresponding emotional blocks.**
- **Yet, blueprint implants are not the only kind of implants one can have.**
- **There are those implants that you place in each other's etheric and emotional bodies when you place a curse on someone or a vow on yourself.**
- **There are also the implants that we receive from alien races for monitoring purposes. These also affect our emotions. Some implants are physical and are placed in our physical bodies, but in all cases there is a corresponding etheric implant.**
- **So, removing just the physical implant will not clear it from us completely.**
- **From the higher perspective, implants are neutral technology.**
- **It is what we do with them that make the difference.**
- **Like money, they can be used to assist or to harm.**
- **All implants are programs. These programs can be changed by us as many of us have experienced with our life blueprint implants.**
- **There are those who have indeed been given implants by others who wish to in some way control an aspect of their behavior.**
- **These implants use fears already in the emotional body to maintain their programming.**
- **We can deactivate them by integrating the fear that keeps them working.**
- **In everything there is a value. This is also true of those implants we may have received from others. If this has happened to you, remember that you allowed it for the purpose of your own soul growth. To be able to deactivate one of these implants takes great courage and spiritual understanding.**

- If we look at life blueprint, we will find the contract for the implant.
- No one else will be able to deactivate these implants for us without incurring headaches and other physical pain. Now is the time to use our power. The days are over when others can do it for us.
- Implants are nothing to fear, they are just technology like computers. Once we learn how to work with them, we will no longer be afraid.

God, Life, Multi-dimensionality, Consciousness

- There are many Universes. Each Universe is governed by a prime creator which we refer to as the God. The God is the manifestation of ALL THAT THERE IS in a particular Universe.
- Everything in the Universe is composed of Energy.
- Strictly speaking, there are many Universes, each governed by its own God or Prime Creator.
- Each Universe had its own set of physical laws which may widely differ from those we are used to. For example, our laws of thermodynamics and our laws of physics, etc. may not apply to other Universes.
- For all practical purposes we are only concerned with our Universe, so we shall confine our attention to the one we exist in.
- Our Universe is actually divided into five different universes each involving its own range of energies.
- Notice that we have distinguished between two different words: Universe (with capital U) and universe (with lower u).
- Clearly we need to have a different word for what describes a Universe, however, in absence of such a word or term we shall suffice by capitalizing the word universe.
- It should be clear that the same laws of physics, mechanics, thermodynamics, and chemistry, etc. equally apply to all distinct 5 universes, one of which we currently reside
- In order to comprehend the distinction among all 5 universes we need to recall the reality of Life and consciousness first.

- Life is bestowed on us by our Prime Creator via shining his [divine] Light upon us that vibrates with a wavelength of vibration which is of the order of 1 over 10 to the power 43.
- Due to the stroboscopic nature of this Light emission, strictly speaking, we are conscious [having life] only during this period of vibration. Therefore, in essence we only consciously exist [are alive] in a discrete and not continuous fashion.
- However, this period is so negligibly minute that we could never 'sense' the 'dark' periods at all. Therefore, for all practical purposes we perceive life, a state of having mental, cerebral, and emotional consciousness, as continuous
- This is parallel with saying that we always exist in the NOW moment. Therefore, strictly speaking there is no future or past for us. There is only the present.
- Consequently, we can define a series of parallel ['time'] lines each representing a particular mode of being.
- We may even assign a series of happenings that belong to our past, present or future to each of these parallel lines.
- However, the reality is that all these timelines can only exist simultaneously only. In other words, these parallel timelines can only exist together and parallel with one another, and not one as the continuation of another timeline, as life is discrete and not continuous.
- The notion of time as we perceive it in 3D is man-made and artificial.
- Strictly speaking, 'time' is nothing as progression of a series of sequence of happenings, one after another.
- In fact, we exist in an ocean of possibilities.
- We can define time as the 'moment' when one task is completed before we start another.
- Based upon what was discussed, it is clear that we all exist by constantly 'vibrating' in and out of consciousness in the Universe.
- Therefore, there are beings of a sentient state in which they are more aware of what is going on in and around them.

- In other words, they have a higher consciousness due to the fact that they are more evolved.
- The natural frequency is intimately associated with being ordained with more [divine] Light that gives and maintains their higher state of consciousness. This is what is referred to as the Light Quotient.
- The higher natural frequency of vibration is also synonymous with higher state of 'life' energy and a higher Light quotient.
- Our 5 universes mentioned earlier are appropriately classified under 'Harmonic' universes HU1 to HU5, each resonating at progressively higher frequencies of vibration.
- In order to be able to exist in each harmonic universe the natural frequency of vibration of a being must be within the range of frequencies defined for that particular universe.
- HU1 corresponds to the lowest vibration range denoting the lowest consciousness which is associated with the densest state of being [natural frequency is inversely proportional to the square root of mass].
- This corresponds to the 'physical' universe with the densest state of matter for our bodies and everything else.
- Alternatively, the physical universe is composed of lower energies, again, inherent to lower consciousness.
- As you progressively move to 'higher' harmonic universes HU2 to HU5, the associated vibration frequency and energies become 'higher' correspondingly.
- At the same time these universes accommodate more conscious/sentient, less dense beings.
- For HU3 and above the sentient beings no longer need physical bodies.
- The harmonic universes are separated from one another via magnetic repulsion zones.
- There exist 3 distinct dimensions [or timelines] within each harmonic universe. The energy levels within these dimensions are progressively higher.
- In 3D, where we currently live, there are 3 different dimensions which may be referred to as D1, D2, and D3.

- Similarly D4, D5, and D6 are associated with HU2; D7, D8, and D9 with Hu3; D10, D11, and D12 with HU4; and D13, D14, and D15 with HU5.
- The 3 dimensional classification of a harmonic universe makes the characterization of the Time-space continuum readily definable.
- If we associate each 'linear' dimension with width, height, and depth respectively it is possible to define space with a vector V characterized by three scalar components in 3 mutually perpendicular directions.
- These directions can actually be defined anywhere as long as they are mutually normal to one another.
- They could be defined in a rectilinear Cartesian coordinate systems x, y, and z; cylindrical, spherical, spherical, helical, or any other as long as the 3 unit vectors defining each direction are mutually perpendicular.
- It is clear that each timeline characterized by one of the mutually perpendicular lines exists in a linear fashion, and thus 'time' is perceived as being 'linear.' This means that at any point on this timeline [present] one can go forward [future] or backward [past].
- This gives the illusion of 'linear' time which in actuality does not exist as everything can only be in the NOW moment, with any other point only representing another NOW record.
- The first harmonic universe is alternatively referred to as the 'physical' or 'incarnate universe.'
- The other harmonic universes are called the Soul [HU2]; Oversoul [HU3]; Avatar [Hu4]; and Rishi [HU5] universes, respectively.
- In summary: there are 5 harmonic universes and a total of 15 dimensions [or timelines] with progressively higher vibration frequencies [or energy levels].
- As all these dimensions exist simultaneously, all in the NOW moment, a spirit [or soul] may be fragmented and the components [called aspects] can experience life concurrently in order for the spirit [or soul] to get more lessons and experiences at the same time.
- After all, the fundamental objective of Life is to comply with the Divine Plan which is to evolve.

- And, the way of evolution is to experience Life more and more, to have more lessons, to learn, and to become a more conscious being.
- Therefore, at any moment and even within each harmonic universe there may exist at least 3 distinct aspects of ourselves, each being a projection of our soul and not being aware of another. Furthermore, if we consider a multi-dimensional linear system consisting of many coordinates [dimensions], it is theoretically possible to resolve [fragmenting] the soul into many components [SELFs or Aspects] each experiencing life in these dimensions separately, independently, and simultaneously.

The Physical Body

- In order to be able to function inter-dimensionally we are given 12 strands of DNA and a sophisticated set of gland system.
- Living multi-dimensionally refers to a condition that you can hear, feel, and communicate with beings from other dimensions of life daily and easily.
- A multi-dimensional being is also a fully conscious entity fully aware of the inner aspects of his/her being and capable of remembering all his/her past lives.
- A fully conscious being is also fully integrated with his/her HIGHERSELF [soul in our case] and can readily communicate with his/her soul.
- All humans on Earth currently have only 2 strands of their DNA active with the other 10 strands being as unplugged or inactive.
- The first step towards acquiring full consciousness is to recode and realign our DNAs and connect them with the other 10 strands.
- The recoding is achieved through high frequency [divine] light that we have been receiving abundantly lately.
- The part of our genetic make-up that is responsible for communicating and receiving the realignment, reconnection and activation (RRA) codes is our RNA which during this process will multiply 6 fold to be able to effectively carry out its communication and other responsibilities.
- Once the codes are received and the 12 strands of DNA are realigned and reconnected, the crystals of the crown chakra are activated.

- To see a confirmation of successful completion of the chakra activation one can refer to the photographs of the crown chakra within our aura.
- Activation is confirmed if an antenna appears in the crown chakra area in the photograph.
- Alternatively, it may be deduced that activation is manifested through a person's lack of desire for any negativity which serve to maintain the astral energies at an optimum high level without any dissipation or bleeding with respect to any negativity.
- During the process of activation of the crown chakra crystals the Hypothalamus awakens after a long atrophic existence.
- The same is true with Pineal gland, the Pituitary gland and the Thymus.
- The objective of the Hypothalamus is to provide for a universal translator through which ethereal and telepathic communication with beings of other dimensions would be possible through exchanging pictures, words and emotions.
- The final process in achieving the full consciousness status is to activate the keys of compassion through the Thymus gland. Without compassion, which is a pre-requisite to attaining unconditional love for self and others, full consciousness cannot be achieved.
- The whole process of activation of 12 strands of DNA, activation of the crown chakra crystals, attaining a universal translator and finally activation of compassion and unconditional love necessitates constant and frequent interaction with the astral glands such as the Pineal, Hypothalamus, and the Thymus.
- This connection is facilitated through use of hormones in the body.
- The hormones are very much dependent on abundant protein and enzymes in the body.
- The proteins are usually richly abundant in red meat and thus it is recommended to consume a considerable amount of red meat during the period that RRA process is in progress.

- **Vegetarians and Conscientious objectors for consumption of meat are reminded that the straight path to evolution, which is the prime directive of life, is primarily achieved through service to others.**
- **If we were to assume that steers and other animals that provide meat for our intake also have the same objective for evolution as us, then it may be considered that they are providing a service to us by giving their body for our ingestion.**
- **Thus, it is appropriate that we consume their meat conscientiously by first giving them thanks to them prior to eating.**
- **This way, the objectives of both our beings are fulfilled. They will have their bodies offered to us as service for which they will evolve to a higher form someday- perhaps becoming humans.**
- **On the other hand, we have satisfied our requirement for facilitating the process of RRA, thus leading to our ascension or evolution.**
- **Emotional clearing would be necessary to be able to access and live the higher dimensional beliefs.**
- **The 9D Nibiruans have given us the 7 Multidimensional Keys of Compassion to be used for this purpose.**
- **These Keys would not only enable us to clear our stuck emotions and remove our blocks, they would activate our “Inner Technology” and thus recode our DNA.**
- **Our DNA would transform from carbon based to crystalline as we cleared the pain of our pasts.**
- **We can change and shift from one timeline to another by using our “inner technology” of compassion.**

The Black Hole

- **In May, 2000 the grand planetary alignment occurred.**
- **There is a black hole that is located in the center of our galaxy.**
- **Our planet Earth is fast approaching this black hole, which is the next cosmic event on the horizon.**

- **Our scientists are aware and concerned about this. They are concerned that if Earth is sucked into this black hole that you will not survive.**
- **What they do not realize that the black hole has an entrance and an exit.**
- **Black holes are portals or doorways between universes.**
- **Imagine all the universes of creation when viewed from above are connected like a giant spider web.**
- **The connecting points leading from one universe to another are the black holes.**
- **A strong magnetic force draws object into the center of a black hole, through it and out the other side.**
- **So, we see that black holes are the connecting points in the web of universes that are also portals with strong magnetic forces that usher planets, ships, etc. into and through the various universes of the web.**
- **As our planet moves towards the black hole in the center of our galaxy, this force will act as an usher, ushering us into the new universe.**
- **This is a parallel universe where we will spend the next 204,000 year cycle.**
- **After that cycle is complete, earth will return to its present universe.**
- **This is the meaning behind the figure 8.**
- **As we move through the black hole, we will not be crushed since earth will be much lighter than it is now.**
- **Mother Earth/Lady Gaia is giving birth to her new self.**
- **Just imagine that the black hole is the birthing canal and the earth that exists through the black hole in the parallel universe will be the new earth.**
- **We will not go through the black hole portal until our planet is ready.**
- **Do not be concerned about this coming event.**
- **Our scientists will continue to be alarmed until they decide to embrace the spiritual aspect of this event.**
