

So What is it All About Anyway?

Mohsen Paul Sarfarazi, Ph.D.

March 2, 2012

- There are many Universes, many Gods in existence.
- Each Universe is the quintessential manifestation of its own 'God.'
- Everything in the Universe is comprised of energy and therefore God exists in the form of pure energy.
- 'All that there is' in the universe is the result of implosion of the pure energy of God into a diverse, infinite types of entities which may exist in ethereal (or spiritual) or in physical form.
- Nothing in Universe is in a state of static existence.
- The Universe is constantly in motion and in an inertial process of activities.
- In other words, everything is in a constant state of vibrations.
- There exists a natural frequency of vibration associated with every entity, every 'thing' in the universe.
- The energy associated with 'God', the prime creator of 'all that there is' is of the highest possible frequency, establishing the threshold for the frequency of 'existence.'
- This state of existence may alternatively be termed as 'love' or 'light' which is the glue that binds everything and every entity together.
- It was 'God' that imploded upon himself/herself to create the universe and consequently 'all that there is' within the universe.
- Conversely, it is only 'love' that could bring it all back together.
- Since God lives in all things and entities it is the foremost dominant, common, and inherent characteristic of all things to seek the creator and have the tendency or desire to converge and reconstruct the original 'God,' 'the creator.'

- Most appropriately, an alternative manner to refer to 'God' is to visualize him/her as 'the light' that shines in all sentient beings, a co-habitant in ALL that guides each and every One to unite with the 'ALL that there is.'
- In essence, 'all is One,' and 'One is all.'
- Accordingly, there exists a collective sense of higher consciousness among all highly evolved beings to want to live in total harmony and synchronicity with one another and to share the experience and knowledge of all that there is among all.
- Similarly, all advanced sentient beings live within a 'holographic matrix' that each and every point of the matrix is privy to all the knowledge of universe and beyond.
- Each experience or bits of knowledge is originally gathered, comprehended, and mastered by a particular being who set out in the universe to explore, to learn, and enlighten him or herself and to share with her/his 'consciousness collective.'
- It is said that once God imploded and formed numerous photons of light a small assemblage of each was referred to as a 'soul,' the creator directed each soul, a child of his/her, to explore the universe in search of knowledge and awareness to the surroundings.
- As each soul behaved in a reluctant and anxious manner as to 'not separate' from the source, god assigned a symbiotic partner referred to as 'ego' to each and every soul to guard the soul against any possible harm or damage.
- The purpose of the ego was just to 'protect and serve' the soul without any individual input or prominence in the affairs of the soul.
- It was a part of training of the children souls to learn and get experience in controlling their egos as to not cross the line so it does not become dominant in the symbiotic relation intended.
- In other words, it was the ego to serve the soul and not vice versa.
- Unfortunately, this was a hard lesson to learn as the less awakened souls found it difficult to regulate, govern, and dominate their mutual association with their egos.

- As a result, they came to learn about selfishness, arrogance, discrimination and other negative dissipative energies that resulted in their diminishing their inherent or acquired consciousness.
- Lower consciousness may be detected and characterized by a condition of lower natural frequency, which leads to stagnation of thoughts, lower rate of evolution, and obviously less refined or sentient way of life.
- Ego was destined not to be one's friend, counselor, or a companion; but only a 'watch dog.'
- Its rationale is selfishness, self-gratification, lust, competition, jealousy, and other destructive thrusts with considerable dissipative physiognomies resulting in lower consciousness.
- In the natural vibrational frequency spectrum of existence there exists a transitional point below which the frequency becomes too retarded.
- The state of consciousness regarding the entity's immediate environment and the status of entity's self-awareness becomes relatively low for the entity to be able to create optimally.
- As a result, a more physical state of being is more proper or desirable.
- This state of existence is particularly appropriate for beings of low consciousness who are evolving.
- Additionally, such an environment provides ample opportunities for studying the process of natural evolution.
- As the energies of duality, good versus evil, are particularly low and belong to lower realms of existence, it is of particular interest to evaluate the effects of duality on consciousness in such lower planes of existence.
- Lower dimensions of existence are specifically associated with ego-based indulgence and are particularly relevant to living under conditions of duality.
- Dark energy minions and their progenitor are predominantly fixated with carnal desires; impulsive attitude for accumulation, 'must have' and materialism; preoccupation for supremacy through violence, manipulation and whatever other means possible; obsession with competition and game playing, mania for lies and deception (in order to suppress and control others), and similar low-frequency and dark energy activities.

- Survival under such devious intentions by transmuting the dark, perseverance, and strive to stay in the light is the most valuable experience one can obtain.
- For this reason, Earth which has been under the control of the dark for the past 13 millennia has provided an excellent academy for learning.
- Conversely, in the 5th and higher dimensions there are no dark energies or any karma present that may be associated with exposure to the dark.
- The purpose of living is to have joy, to be motivated, and to be at peace.
- The objective is to create new phenomenon, new beings, and new planets, solar systems, galaxies, or universes.
- The lighter body is much easier to maintain; there are no compulsory jobs or paychecks; no money; or obsession to own or accumulate; no need for survival.
- Conversely, there is abundance; you work because you want to and not because you have to; and you work to 'create.'
- The sentient members of the higher realms are all connected to energy grids specific to their natural frequencies.
- These entities communicate with one another by means of telepathy.
- They are clairvoyant, and have a host of other powers that include, telekinesis, self-teleportation, manifestation, cloaking and a host of other powers.
- Their capability to connect to their energy grids is the primary cause for their ability to tap into a vast source of knowledge and energy which may be manipulated through thought to effect manifestation of the phenomenon intended.
- There are no spatial dimensions; there is no time, no past, present, or future.
- Everything is just is in the NOW moment; everything is perpetual.
- Time is perceived as a progression of an incipient project or event after completion of another.
- You may imagine yourself in a vast ocean of time.
- A next moment appears after you are through with the present.
- The 'next' moment is also a part of the present as the present moment you are spending in completing a project.
- Everything is continuous, everlasting, and occurs uninterrupted.

- On the contrary, in the 3rd dimension there is a perception of space and of time.
- We commonly observe that everything occupies a three dimensional space.
- The location of an object is identified as the coordinates of the projection of the point on a three dimensional Cartesian coordinate system.
- If you start from a given point and traverse a certain distance (coordinates of the point) to the right (or left) and then ahead (or behind) and then up (or down) you will reach the point whose coordinates are specified.
- Since things (or people) age and deteriorate and finally die or disappear, the necessity of the concept of time and designation of past, present and future become obvious.
- On the contrary, in the higher realms there is no ageing or perishing and things last forever, and may be replaced (such as '2000 year old' body of a person) to preserve it in the 'NOW' moment.
- Also remember that as you move higher in dimensions of consciousness the necessity of the existence of a 'body' totally disappears and the entity can exist in a pure ethereal form.
- There are a total of 15 dimensions in our Universe; but any entity above the 7th dimension can exist in pure energy form without necessitating the existence of a physical body.
- Also it should be clear that as we move in the higher dimensions the body becomes much 'lighter' in nature.
- For example, it is estimated that our weight should decrease by a factor of about 80% due to less density of our 'light bodies.'
- In order to understand the analogies between the reality of consciousness dimensions and the concept of 'spatial dimensions' used in quantum mechanics, or membrane theories (M-theories):
 - (a) In both cases there are really 10 dimensions within OUR universe.
 - (b) The 11th dimension describes the interaction between two adjacent universes in which each may be modeled as a highly flexible membranes or 'bubbles.'

- (C) The other dimensions could be described as rotational coordinates about each say Cartesian axes, and the interaction of the 3 translational and the rotational coordinates.
- (d) Considering rotations about each of the 3 coordinate axes, this generates 3 additional dimensions and a total of 6 dimensions, that is, three translational and three rotational coordinates.
- (e) Now if we consider the interaction of one translational (or rotational) coordinate with another rotational (or alternatively translational) coordinate systems there are 3 additional parameters to be considered if we see the Universe as a symmetric, homogeneous, and anisotropic system.
- (f) Hence so far we have 9 coordinate planes of existence: 3 translational, 3 rotational and 3 mixed.
- (g) Adding the effect of time in the fabric of time and space as we perceive in the 3rd dimensional we get a total of 10 planes of existence.
- (h) To include the effect of interaction of our universe to a neighboring one, we will get a total of 11 planes of existence as mentioned before.
- The combined effect of translational and rotational motion plus time (to render a dynamic phenomenon) without the coupling effect of translation on rotation and vice versa is easier to visualize.
- These actually give rise to a 7 dimensions of existence for the condition of 'physicality.' Is this a coincidence?
- On the other hand, to include the other 3 dimensions renders it difficult to come up with a perceivable visual picture for the whole phenomenon.
- On the other hand, the mathematical problem may be understood by employing the concept of 'tensors' which specifies that there should be a total of three to the power two parameters (planes) to describe the spatial coordinates, that is 9 dimensions.
- This is why Einstein's theory of relativity, the general wave theory and the M-theories and all concepts in quantum mechanics (or alternatively, quantum physics) are described via application of the 'Tensor Calculus.'
- More interestingly, dimensions 7-9 belong to the harmonic universe HU3, which is the 'Realm of Oversouls,' which does not necessitate physicality.

- Dimensions 10-12 include the effect of rotational on translational coordinates and vice versa, which is very difficult for us to visualize.
- Our energetic grid, when completed on 12/12/12 will only be capable of expansion and contraction, which is indigenous to a translational coordinate. This is why our Terra Nova will only be able to traverse the first 9 coordinates/dimensions starting 12/12/12.
- It will take yet another 12 years, until year 2024, before the new cristo-electric grid will acquire the capability for rotational movement and be able to traverse the higher 3 dimensions 10-12, the 4th harmonic universe HU4, which is 'the Realm of Avatars.'
- The dimensions 13-15, the 5th harmonic universe HU5, is the 'Realm of Divine,' the Prime Creator, the Metatronic Engine, and 'the Realm of Rishis.'
- It is most likely that our Rishis are not even aware or conscious of physical state at this time.
- The harmonic universe HU5 is far beyond our realm of comprehension presently.
